

## **Data**

To consider problem we can list data as follows:

Data was collected from a file kaggle. <https://www.kaggle.com/rabhar/zomato-restaurants-in-india>

It contained data of all cities of India. I cleaned the data and data of only Delhi NCR was created which included New Delhi, Gurgaon, Noida, Greater Noida, Faridabad.

Various features of restaurants like Delivery, Takeaway , Seating etc. were explored.

This data was further cleaned to remove missing values and various visualizations were created to draw certain conclusions.
